Abstract

The core of the architectural curriculum is based on the design studio which focuses on learning by doing. The learning process in the design studio is takes place in critic sessions. These sessions are kind of communication of ideas and transmitting of knowledge from instructor to student.

In contrast to other disciplines, in the architectural design education the evaluation and the assessment are the important part of the learning and teaching process. The Jury system is a traditional architectural learning assessment tool. In this system the student present his/her work in the front of the jury and get feedback or criticism. According to Webster (2006), Jury is the most performative stage of education where the student and agency (the discipline of architecture-as represented by the critics) actually interact (Webster, 2006).

The aim of this study was to reveal the perceptions of architectural design students' about the 'Jury system' as a grading system in architectural design studios. The participants for this study included second, third and fourth grade architectural design students enrolled in the Department of Architecture at the Faculty of Architecture of Mersin University during the 2014-2015 school year. To collect data, each participant was asked to complete the prompt "A jury is like"

sy

1. Introduction

Architectural education is based on design studio where active learning occurs with transmitting knowledge from instructor to students. But this transmission of knowledge is different from other disciplines throughout the university. In the most of the other disciplines, instructors teach by lecturing, assigning homework and assessing student performance through exams. In the architectural studio, teaching and learning activity is different from the traditional environment. Schön (1985, 1987) describes the activities in the design studio as learning to 'think architecturally', meaning that the student must experience 'learning by doing', 'knowing by-action', and 'reflection in action'. Students learn through working on a design problem under the supervision or guidance of an experienced instructor to provide an effective solution. Unlike a lecture courses, in a design studio, students are evaluated through a series of presentations and discussions. They present their drawings and physical models in front of a jury which is consist of their own instructors, two or three local architects and the instructors from other studios at the same school. With presenting their work and receiving feedback from the instructor, the students can revise their designs. Oh, Ishizaki, Gross and Do (2013) called this feedback as critiquing and described it as 'a predominant way through which architecture students acquire design expertise from their instructors'. The critique is the backbone of the

2.3. Data Collection

While doing this research the participants were informed about the metaphor technique. While collecting the data from the students, each student was filled the statement 'Architectural Jury System is like.....because.....'

2.4. Data Analysis

The data was analyzed by descriptive analysis. (The metaphors were first sorted out and categorized and statistically evaluated) 110 architectural design students participated to the study. Metaphors of 102 participants were taken in to consideration. The metaphors developed by the architectural students were analyzed at five stages; (1) classification stage; (2) elimination stage; (3) reorganizing and compilation stage; (4) category development stage.

3. Findings

The answers of the participant students being able to make meaningful metaphors were evaluated in our study. There were 68 valid metaphors about the concept of Jury System in design education was made by the students of architectural design students. The metaphors were collected based on 7 different categories in terms of common features (Table 1.).

The metaphors of the concept of Jury system made by architectural design students have a negative approach. They resemble the system as 'nightmare, horror film, death, etc.....'. All these negative feelings, indicate that they can't understand the jury mechanism in the architectural design education.

Table 1. The Metaphor categories of the students of the Architectural Design about the concept of Jury System

Classification	Metaphors	Frequency (F)	Percentage (%)
1. Tension-Fear-Excitement	Street Fights (1), Nightmare (8), Exciting and Fearful city (1), Black hole (1), Horror Tunnel (1), Judgment Day (4), Horror Film (4), Sirat Bridge (6), The first day of the primary school (3), The world of dwarfs and giants (1), Demon of hell (1), Decapitator (2), Afterlife inquiry (1), Death (2), Stage (1), Hell (1), Limbo (1), Cliff (1), Surprises (1), Stressful experiment (1), Life critical (1), Sky diving (1), Homicide desk (1), Stressful days (1), Waking up from a dream(1)	47	41.17
2. Competition	Wipeout punch wall (1), Local elections (2), Running race (1), Boxing match (1), Hunger Games (1), World most hard games (2)	8	7.84
3. Illness	Getting Cold (3), The sniffles (1), psychological exhaustion (1)	5	4.90
4. Guide, advisor	The Chef who is forming paste (1), Ivy which take over our entire life (1), Shepherd (1), Gardener (1), Guiding to	11	10,78

		the project (1), Vulture (1), TV Channels (1), Self Scheduling (1), Transferring our feelings to other people (1), Teach one's grandmother to suck eggs (1)		
5.	Critic	Mother-in-law (1), Inquiry (4), Criticism (3), Torture (1), Politician with opposite idea (1), Trial (2), Businessman disliking everything (2), Confession (1), Judge (1).	16	15.68
6.	Food	Alcohol (1), Pepper Turkish oblate (1), sour jelly tots (1), Sacrifice (1).	4	3.92
7.	Human Being	Zombie Person (1), Receiver + Seller (1), grouchy child (1), Both lovable and fearful boss (1), Thief (1), Distant relative (1), Pessimist Person (1), Police (1), Prisoner (1), Anxious, exciting poised child (1)	11	10.78
TOTAL		68	102	100

4. Results and Discussion

The evaluation and assessment system in architectural education refers to the presentation of students' design proposal to a jury of invited architecture practitioners and academicians, for providing feedback of progress of the project. Each student exhibits his/her works containing drawings, diagrams, physical models of the design and digital representations of his/her work. He/she has a short time to deliver an account of the work, its conceptual basis and the description of the design outcome. Then jury provides feedback to the student for the development of his/her project. By looking at the metaphors stated by the students, they see the jury as horrible, fearful and exciting situation.

Students should tell and describe their work in front of a jury both with oral presentations. This situation may make them anxious. Because of this, the metaphors they stated can be stem from their lack of communication ability. This study emphasized that the instructors in the architectural education should give importance to the student-instructor communication.

5. Conclusion

In our study it was aimed to find out the metaphors of the architectural design students based on their experience related to the jury system in their education.

According to the results of the research, metaphors formed by the architectural design students in relation to jury system concept are mainly gathered under the feelings of fear, excitement and tension. Students see the evaluation and assessment system of architectural education is not as part of their education. They are not aware of the importance of the jury system. Students have not mentioned the jury system as academically.

The results of this study verify the other researches' findings based on the educational value of the jury system. Most of the problems that have been mentioned by the students were stem from the communication aspects. As Salama (2010), mentioned in his study the other problems were stem from the lack of presentation skills and verbal expression of the educational program.

This study provided several outcomes: (i) Students gain the self-awareness of their perceptions of assessment and evaluation system of architectural education, (ii) also instructors learn about students'

hidden perceptions on the jury system, (iii) so they can revise and review their teaching philosophies and studio practices.

As in all studies, this study has limitations. Since the study was designed according to qualitative research design, the generalizability of this study is limited. For this reason, similar researches can be carried out in different universities of department of architecture with more students.
